Dr. Reza Sadrian
Founder & Medical Director

Sadrian Plastic Surgery, Laser & Skin Care Institute of San Diego

Plastic Surgery

With over 16 years of advanced rigorous medical and specialty training, Dr. Reza Sadrian holds the rare and distinct honor of being one of only a few select plastic surgeons in the country dually certified in plastic and reconstructive surgery as well as oral and maxillofacial surgery. This extensive training has given him unique skills and perspective and, over 19 years, he has performed well over 15,000 successful procedures.

Listed as a "Top Doctor" in Castle Connolly's peer-nominated ratings for several years, Dr. Sadrian focuses on aesthetic plastic surgery, performing facial surgery procedures, including face-lift surgery and rhinoplasty; breast surgery procedures, including breast augmentation and breast lifts; and body contouring, including tummy tucks, mommy makeovers, and liposculpture. In his fully accredited comprehensive center and medical spa, he provides individualized patient-appropriate treatments, including a full range of nonsurgical procedures, from Botox, injectables, and fillers to laser therapies, facials, and medical-grade skin care. Their state-of-the-art surgical suite is certified with the highest level of accreditation, and their anesthesiologists are all board certified. Dr. Sadrian himself is also on attending staff at Scripps Memorial Hospital La Jolla.

Known for his meticulous nature and individualized attention, care, and time that he personally devotes to each of his patients, he remains humble, attentive, and easy to talk to. He achieves extraordinary results by combining meticulous advanced skills with artistic sensibility to deliver elegant, natural results customized to each patient's desires and uniqueness without a surgically done look.

"No two patients or procedures are ever the same," Dr. Sadrian says. "We are focused on providing the highest quality care and safety with a detailed assessment, honest recommendations, and meticulous and attentive care along our patients' entire journey, including before, during, and after." ■
